# STEALTH TECHNOLOGY®

Available in 1.28, 1.1 and 0.8 GPF

## HOW IT WORKS

### Before the flush...

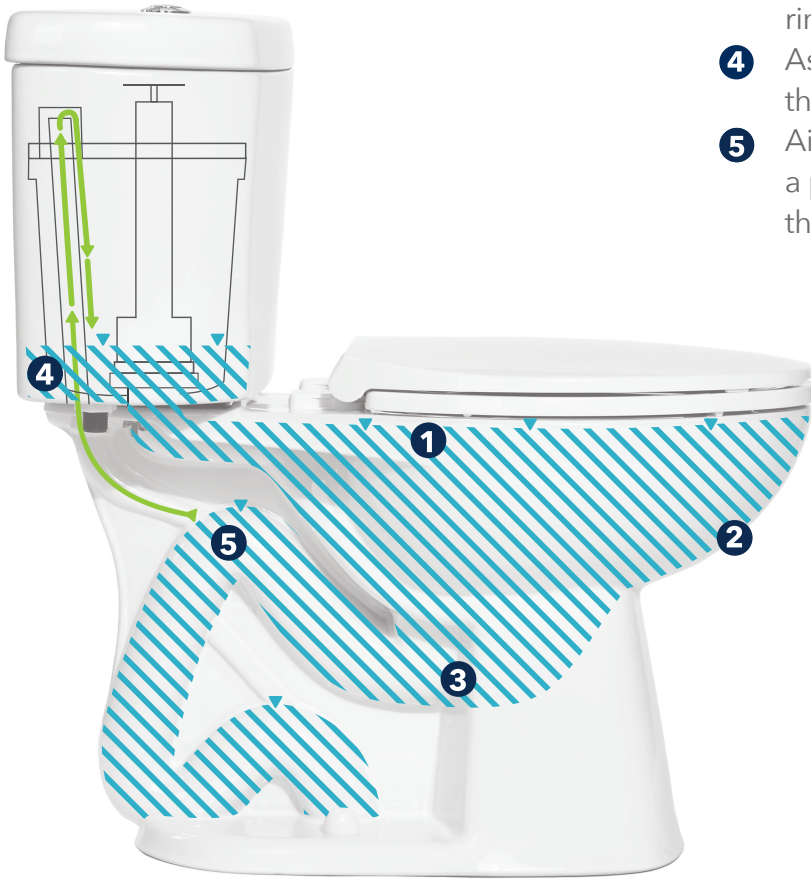

- 1 Water begins to refill the inner chamber and the tank surrounding it.
- 2 As water fills the inner chamber, it pushes air into an air transfer tube.
- 3 Air leaves the transfer tube and pressurizes the trapway.
- 4 Air pressure exerted on the "bowl side" of the trapway creates a larger water surface.

## BENEFITS OF STEALTH TECHNOLOGY®

- Extra Large Water Spot
- Superior Flush Performance - MaP Premium Rated
- Powerful Vacuum-Assist Flush and 360° Wash Cleans Bowl with Every Flush
- Custom 400A Fluidmaster® Fills from the Bottom Up for a Quiet Refill

### During the flush...

- 1 When the flush button is pressed, water leaving the tank forces water through the openings in the side and front of the bowl rim.
- 2 Water leaves the tank and enters the bowl with high velocity.
- 3 Water flows down through the bowl, thoroughly rinsing the surface.
- 4 As water leaves the inner chamber, it pulls air from the trapway into the transfer tube.
- 5 Air leaving the trapway creates a vacuum, exerting a pull that accelerates the force of water flowing through the trapway.

## Exceeds Industry Line Carry Standards

Niagara toilets meet and exceed a 40 ft. minimum standard.
